PROFESSIONAL SUMMARY

Data Scientist & Applied ML Researcher with a strong mathematical foundation (BSc Mathematics) and pursuing MSc Data Science. Hands-on experience developing end-to-end machine learning pipelines, deep learning architectures (PyTorch CNNs), NLP text classifiers, and interactive business intelligence dashboards (Power BI, Streamlit). Proficient in Python, SQL, Scikit-Learn, and Explainable AI (SHAP/LIME). Passionate about transforming complex datasets into actionable business intelligence and scalable predictive systems.

TECHNICAL SKILLS

- **Programming & Databases:** Python (Pandas, NumPy, Scikit-Learn, PyTorch), SQL (MySQL, PostgreSQL), MongoDB
- **Data Analytics & BI:** Power BI, Advanced Excel, Exploratory Data Analysis (EDA), Matplotlib, Seaborn, Plotly
- **Machine Learning & AI:** Supervised/Unsupervised ML, Deep Learning (CNNs), NLP (TF-IDF), Explainable AI (SHAP, LIME)
- **Web & Deployment Tools:** Streamlit, FastAPI, Git, GitHub, Linux/Bash, Jupyter Notebooks
- **Core Competencies:** Feature Engineering, Statistical Hypothesis Testing, Predictive Modeling, Model Interpretability

PROFESSIONAL EXPERIENCE & INTERNSHIPS

Machine Learning Intern | SmartED Innovations Feb 2026 – March 2026

- Engineered end-to-end machine learning workflows using Python, Pandas, and Scikit-Learn.
- Performed comprehensive data preprocessing, outlier detection, and feature encoding across tabular datasets.
- Benchmarked multiple supervised classification and regression algorithms, optimizing hyperparameters to maximize cross-validation performance.
- Documented model evaluation metrics (Precision, Recall, F1-Score, RMSE) and prepared technical reports for stakeholders.

FEATURED PROJECTS

Explainable ML for Cardiovascular Disease Risk | Python, Scikit-Learn, SHAP, LIME

- Implemented interpretable predictive models to forecast early cardiovascular disease risk.
- Integrated SHAP (Shapley Additive exPlanations) and LIME to generate local feature attribution plots and global feature importance rankings for clinical transparency.
- Formatted findings into an IEEE-standard academic research paper on interpretable healthcare AI.

Handwritten Digit Recognition System | PyTorch, CNN, Computer Vision, Streamlit

- Built a deep Convolutional Neural Network (CNN) architecture with batch normalization, dropout, and pooling layers trained on the MNIST dataset.
- Achieved ~99% test classification accuracy with robust generalization.
- Deployed an interactive Streamlit web application enabling real-time drawing canvas inference and live class probability charts.
