PROFILE SUMMARY

Data Analyst pursuing an MSc in Data Science (2027), with hands-on experience in SQL, Python, data cleaning, exploratory data analysis, and statistical analysis through an internship, research, and the IBM Data Analyst capstone. Analyzed 11,398 survey responses and 27,005 job postings using SQL and Python; built Streamlit dashboards and regression models. Seeking a Data Analyst internship.

EDUCATION

Master of Science (MSc) in Data Science, Chandigarh University, India 2025 – Jun 2027 (*Expected*)

Bachelor of Science (BSc) in Mathematics, Krishna University, Andhra Pradesh 2017 – 2020

TECHNICAL SKILLS

Data Analysis: Python, Pandas, NumPy, Data Cleaning, EDA, Feature Engineering, Statistical Analysis

SQL & Databases: SQL, SQLite, MongoDB

Visualization & Tools: Excel, Power BI, Matplotlib, Seaborn, Plotly, Streamlit, Jupyter, Git, GitHub

Statistics & ML: Statistics, Probability, Hypothesis Testing, Regression, Classification, Scikit-Learn

Languages: English, Telugu, Hindi, German (Elementary)

RESEARCH

Cross-Dataset Evaluation of Machine Learning Models for Heart Disease Prediction

MSc Dissertation (in progress) | Supervisor: Dr. Naveen Kumar Mani | github.com/raghavendragolla/cvd

- Harmonized four public UCI heart disease cohorts (918 patient records), trained Logistic Regression, Random Forest, SVM, and XGBoost models, and ran 24 cross-dataset transfer experiments.
- Evaluated ROC-AUC, calibration (Brier score, ECE), dataset shift, and SHAP explanation stability; found that a strong ROC-AUC alone did not guarantee reliable risk estimates on a different cohort.

EXPERIENCE

Machine Learning Intern, SmartED Innovations (Remote)

Jan 2026 – Mar 2026

- Cleaned and analyzed tabular datasets (EDA) using Python, Pandas, and NumPy.
- Built and deployed a house price prediction app comparing three regression models in Scikit-Learn.

PROJECTS

Tech Trends and Skills Analysis (IBM Data Analyst Capstone) *SQL, Python, Pandas, Streamlit*

- Cleaned 11,552 developer-survey responses down to 11,398 unique records, combined them with 27,005 job postings, and wrote 10 analytical SQL queries (CTEs, window functions) on SQLite.
- Tested hypotheses with Mann-Whitney U, Welch's t-test, and chi-square tests; presented findings in a five-tab Streamlit dashboard and a written report.

California House Price Prediction (Internship Project)

Python, Scikit-Learn, Streamlit

- Compared three regression models on 20,640 housing records; gradient boosting reached an R-squared of 0.84 against 0.60 for the linear baseline. Deployed as a Streamlit app with an interactive map.

CERTIFICATIONS

IBM Data Analyst Professional Certificate — IBM / Coursera, Apr 2026

Machine Learning Certificate — SmartED Innovations, Mar 2026
